

Diabetes Biomarker Report – Type 2 Diabetes Screening

Patient Name: Sample Patient

Age: 45

Gender: Female

Laboratory Values:

Pregnancies: 3

Fasting Glucose: 145 mg/dL (High)

Blood Pressure: 80 mmHg

Skin Thickness: 25 mm

Insulin Level: 130 μ U/mL

Body Mass Index (BMI): 32.0 (Obese Category)

Diabetes Pedigree Function: 0.45

Clinical Interpretation:

Elevated fasting glucose and high BMI indicate increased risk of Type 2 Diabetes Mellitus.

Impression:

Patient shows significant biomarkers suggestive of Type 2 Diabetes.

Lifestyle modification, dietary control, and further endocrinology evaluation are recommended.

Note:

This report is generated for AI-assisted early screening and does not replace professional medical diagnosis.
